PREFACE

This factbook of cities, towns, and counties in New Hampshire is an endeavor by the Economic and Labor Market Information Bureau, of New Hampshire Employment Security, to place both similar and useful information into one readable publication to be used primarily for comparative purposes. The data is grouped by town or city within each county and has a fact page for each individual county and one for the entire State of New Hampshire.

Each fact page represents data culled from the 1990 Census and is composed of sections on population, education, veterans' status, income, employment, and commuting patterns.

Your comments on this factbook are genuinely encouraged. Please feel free to contact us if you have any questions. Thank you.

Cleaven Ferguson, Jr., Labor Market Analyst II

  - Rockingham County .... *xviii*
  - Strafford County .... *xix*
  - Sullivan County .... *xx*

The *Factbook*:

- Statewide 1
  - Belknap County 3
  - Carroll County 15
  - Cheshire County 35
  - Coos County 59
  - Grafton County 103
  - Hillsborough County 145
  - Merrimack County 177
  - Rockingham County 205
  - Strafford County 243
  - Sullivan County 257

Appendix: New Hampshire Cities and Towns ranked by 1990 Population 273

INTRODUCTION

This issue of the *Factbook on Counties, Cities, and Towns in New Hampshire* will share some of the 1990 Census information that relates to the labor force and economic characteristics of New Hampshire's population. These subjects include labor force participation, armed forces activity, educational attainment, commuting patterns, and employment by industry and occupation.

Where possible selected categories will be compared with the 1980 Census. It should be noted, however, that there could be differences in the information presented. These discrepancies are not a result of error but rather differences in methodology, time-frame, etc.

LABOR FORCE

The labor force is the sum of all those 16 years of age or older who are working (employed) plus those looking for work (unemployed). The extent of labor force participation (labor force participation rate) is calculated by dividing the civilian labor force (i.e., those 16 years of age or older, who are either working or unemployed, but looking for work) by the total noninstitutional population 16 years or over. For example, in 1990 the civilian labor force in New Hampshire was 612,345; divided by the noninstitutional population of 858,615, this results in a labor force participation rate of 71 percent. Further analysis shows that males stayed level at a rate of 79 percent versus 1980, but females increased from 54 percent, in 1980, to a participation rate of 64 percent in 1990.

EMPLOYMENT BY INDUSTRY

Industry employment grew roughly 33 percent between 1980 and 1990. Services and trade racked up the largest increases in employment with 62,956 and 41,550 positions, respectively. The services sector covers a vast array of industries whose services were in high demand over the past decade, particularly professional and related services, personal services, health services, and entertainment and recreation services. The lion's share of the trade positions came from the retail trade side, which resulted in a demand for consumer products spurred on by both a growing population and a growing employment base between 1980 and 1990. Manufacturing was the only sector showing a decline between 1980 and 1990, losing some 8,569 positions for a 6 percent decline.

EMPLOYMENT BY OCCUPATION

Because many occupations are tied to specific industries, it should come as no surprise that the rise and fall of certain industries affects certain occupations. With the slow growth of manufacturing, occupations such as operators, fabricators and laborers encountered negative growth between 1980 and 1990, off 11 percent from 88,003 jobs in 1980 to 78,699 in 1990. The fastest growing occupational divisions between 1980 and 1990 were Managerial and Professional Specialties and Technical, Sales and Administrative Support increasing 66 percent and 45 percent respectively. These two divisions represent 60 percent of the occupational pie, as opposed to 52 percent in 1980. The attached Industry and Occupation chart gives a broader look at all occupations and industries tracked by the Census Bureau.

EDUCATIONAL ATTAINMENT

The number of college graduates increased between 1980 and 1990 from 98,684 to 183,607, approximately 86 percent. A note of caution: the comparability of data from census to census is at issue. For example, is "4 years of college" from the 1980 Census the same as "college graduate" in the 1990 Census? Is "4 years of high school" equal to "high school graduate?" Is "5 or more years of college" the same as "graduate/professional degree?" Probably (at least that's what is assumed) but it is never spelled out specifically.

COMMUTING PATTERNS

A significant change in commuting patterns shows that the number of people who work at home has risen some

82 percent from approximately 11,000 in 1980 to a little over 20,000 in 1990. Also, of the 566,589 people sampled approximately 17 percent commute to jobs out of the state with the largest number coming from Rockingham County, some 44,279. Hillsborough County was second at 29,770 people commuting to out of state jobs.

ARMED FORCES

Armed forces activity among females has made a dramatic increase from a 1980 activity level of 363 to a 1990 total of 575 on active duty, up 58 percent. While men still constitute a vast majority of all those serving in the armed forces from New Hampshire, women have made small but measurable gains in their active duty participation. In 1980, of the 4,338 persons on active duty in the military 363 or 8 percent were females. But, in 1990, 13 percent of the 4,567 people in the military from New Hampshire were women. Men, conversely, went from 92 to 87 percent in the military from New Hampshire during the same period. However, as cutbacks in defense spending are proposed and the threat of war seems to be diminishing, troop strength may be reduced affecting both male and female armed forces members alike.

FACTBOOK PRIMER

One way to become familiar with the data in this book is to follow along as we review the categories with examples. Each example displays information included in the **Factbook.**

POPULATION - Total census population taken in 1990 which is broken down by sex and ethnicity. Persons of Hispanic origin may be of any ethnic group. **Example: New Hampshire's 1990 total population was 1,109,252. Females accounted for 565,708; non-whites totaled 21,819; and people of Hispanic origin numbered 11,333.**

EDUCATIONAL ATTAINMENT - The highest level of school completed or the highest degree received. The category "Graduate/Professional degree" includes persons who have been awarded a master's degree or were awarded a professional degree as in medicine, law, veterinary, etc. The category "Bachelor's degree" includes persons whose highest degree is awarded upon the completion of an accredited four year undergraduate college or university curriculum. The category "Associate's degree" includes persons whose highest degree is an associate's degree in (1) an occupational program that prepares them for a specific occupation, or (2) an academic program primarily in the arts and sciences that is transferrable to a bachelor's degree. **Example: Of the 830,129 people reporting on their educational attainment 247,632 have either an Associate's, Bachelor's, or a Graduate/Professional degree.**

VETERAN STATUS - A "veteran" is a person 16 years or over who served (even for a short time), but is not now serving on active duty in the United States Army, Navy, Air Force, Marine Corps, or the Coast Guard, or who served as a Merchant Marine seaman during World War II. **Example: Of the roughly 141,617 persons who said they were veterans, approximately 7,362 were females.**

POVERTY LEVEL - Poverty status was determined for all persons except institutionalized persons, persons in military group quarters and in college dormitories, and unrelated individuals under 15 years old. Poverty statistics were based on a definition originated by the Social Security Administration in 1964 and modified by Federal interagency committees in 1969 and 1980 and prescribed by the Office of Management and Budget. The average poverty threshold for a family of four persons was $12,674 in 1989. **Example: Of the 117,167 persons over the age of 64 for whom poverty status was determined, 11,900, or 10 percent were below the poverty level in 1989.**

HOUSEHOLD MONEY INCOME - Information on household money income received in the calendar year 1989 was requested from persons 15 years and over. The eight types of income reported in the census were:

(1) Wage or Salary Income - includes total money earnings received for work performed as an employee during calendar year 1989;

(2) Nonfarm Self-employment Income - includes net money income (gross receipts minus expenses) from one's own business, professional enterprises, or partnership;

(3) Farm Self-employment Income - includes net money income (gross receipts minus expenses) from the operation of a farm by a person on his or her own account, as an owner, renter, or sharecropper;

(4) Interest, Dividend, or Net Rental Income - includes interest on savings or bonds; dividends from stockholding or membership in associations; net income from rental of property to others and receipts from boarders or lodgers, net royalties, and periodic payments from an estate or trust fund;

(5) Social Security Income - includes Social Security pensions and survivors benefits and permanent disability insurance payments (Medicare reimbursements are not included);

(6) Public Assistance Income - includes: (a) supplementary security income payments made by Federal or State welfare agencies to low income persons who are aged (65 years old or over), blind or disabled; (b) aid to families with dependent children, and (c) general assistance;

(7) Retirement or Disability Income - includes: (a) retirement pensions and survivor benefits from a former employer, labor union, or Federal, State, county, or other governmental agency; (b) disability income from sources such as worker's compensation; companies or unions; Federal, State, or local government; and the U.S. military; (c) periodic receipts from annuities and insurance; and (d) regular income from IRA and KEOGH plans;

(8) All Other Income - includes unemployment compensation, Veterans Affairs (VA) payments, alimony and child support, contributions received periodically from persons not living in the household, military family allotments, net gambling winnings, and other kinds of periodic income other than earnings.

PER CAPITA MONEY INCOME - the mean money income computed for every man, woman, and child in a particular group. It is derived by dividing the total income of a particular group by the total population in that group. In larger cities and towns the per capita money income will be reported by ethnic groups; however, in the smaller cities and towns just the total per capita income will be reported.

MEDIAN FAMILY MONEY INCOME - the median divides the money income distribution into two equal parts, one having incomes above the median and the other having incomes below the median. "Families" includes a householder and one or more persons living in the same household who are related to the householder by birth, marriage, or adoption.

MEAN FAMILY MONEY INCOME - this is the amount obtained by dividing the total money income of a particular statistical universe by the number of units in that universe. In compiling statistics on family income, the incomes of all members 15 years old and over in each family are summed and treated as a single amount.

LABOR FORCE (EMPLOYMENT) STATUS - employment status referred to all persons 16 years old and older who: (a) worked at any time; (b) did not work, but had jobs or businesses from which they were temporarily absent (excluding layoff); (c) were on layoff; and (d) did not work, but were looking for work, and were available for work. **Example: Some 612,345 people were in the labor force in the 1990 reference period. This figure represents 574,237 people as employed and the remaining 38,108 as unemployed. The unemployed are attached to the labor force because they are performing job seeking activities such as: (a) registering at a public or private employment office; (b) meeting with prospective employers; (c) investigating possibilities for starting a professional practice or opening a business; (d) placing or answering advertisements; (e) writing letters of application; or (f) being on a union or professional register. Males comprised 55 percent of that total. The labor force participation rate is the civilian labor force divided by the sample population e.g. 612,345/858,615 = 71 percent participation rate for the state in 1990.**

PLACE OF WORK - data on place of work refer to the geographic location at which workers carried out their occupational activities. The tabulations provided here refer to persons who worked in the same county where they lived, worked in a county different from the one in which they lived, or worked out of state. **Example: Of the 566,589 people sampled statewide about their place of work, 388,368 or 69 percent worked in the same county of their residence. Of the 177,055 persons sampled in Hillsborough County 5,151 or 3 percent worked at home. In Rockingham County approximately 44,279 of the 131,576 people sampled responded that they worked outside of the state; roughly 34 percent.**

COMMUTING MODE - refers to the principal mode of travel or type of conveyance that the person usually used to get from home to work. **Example: Since New Hampshire does not have a large public transportation network, of the 566,589 residents sampled 443,317 or 78 percent commuted to work by driving alone and 12 percent or 69,904 carpooled.**

COMMUTING MINUTES - includes the total number of minutes that it usually took the person to get from home to work. The elapsed time includes time spent waiting for public transportation, picking up passengers in carpools, and time spent in other activities related to getting to work. **Example: Some 68.2 percent of the 566,589 residents sampled indicated that their commute to work took less than thirty minutes.**

EMPLOYMENT BY CLASS - categorizes persons according to the type of ownership of their employing organization. **Example: Private wage and salary workers totaled 453,291 in New Hampshire for 1990. Not shown, however, are 1,876 unpaid family workers. Total workers sampled was 574,237.**

EMPLOYMENT BY INDUSTRY - relates to the kind of business conducted by a person's employing organization. **Example: Statewide the largest industry is retail trade followed by durable goods manufacturing. The industry that employs the most people in Merrimack County is retail trade followed by the manufacturing of durable goods.**

EMPLOYMENT BY OCCUPATION - describes the kind of work the person does on the job. **Example: In Hillsborough County administrative support occupations employed the most people (29,362), followed closely by professional specialties (28,474).**

New Hampshire

Comparing 1990 and 1980 U.S. Decennial Census numbers.

	1990	1980	net change	% change
